1. Claims 1-11 are presented for examination.

2. The drawings are objected to because the drawing lacks suitable legends.

Without appropriate labels applicant has nothing but a bunch of numbered boxes with arrows connecting them. Corrected drawing sheets in compliance with 37 CFR

1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-9 and 11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kennedy et al. (Patent No. 5,740,417).
5. The examiner would suggest applicant review Fig. 1 and read col. 2, line 25 through col. 5, line 11 and claim 1 before responding. The examiner would point out that he considers an appropriate instruction addressing unit to be inherent in Kennedy, or he could not fetch instructions. Also, the examiner is taking the position that Kennedy's branch history is a measure of activity for instructions on the two paths of a branch. It is a measure of the frequency of recent execution of the instructions along the two paths.
6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
7. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kennedy et al. (Patent No. 5,740,417).
8. Kennedy taught the invention of claims 1, 8, and 9 from which claim 10 depends. He did not teach the technique of using traces to establish branch behavior and then use this information to make static branch predictions. However, the examiner takes Official Notice that the technique was well-known in the art at the time of applicant's invention. One of ordinary skill would be motivated to combine the technique with Kennedy's teaching because it would still afford the power savings of Kennedy's

system, would simplify the processor's circuitry, and would offer potential additional power savings since the dynamic branch prediction circuitry would be eliminated.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

10. Chauvel et al. (Patent No. 7,062,304).
